SUMMARY

Results-driven Python Developer with 1.5 years of hands-on experience developing, testing, and deploying Python applications, RESTful APIs, microservices, and automation systems across manufacturing and digital-marketing/BPO domains. Proficient in Django, Django REST Framework, FastAPI, Flask, and OOP-driven backend design, with production experience across PostgreSQL, MySQL, MongoDB, and BigQuery, and third-party/cloud API integration (Google Cloud, Google Ads, Google Analytics). Comfortable owning the full delivery lifecycle — provisioning Linux VPS servers, containerizing with Docker, managing Git/GitHub-based CI/CD, and automating business workflows with Python, Selenium, Google Apps Script, and n8n — through to debugging, performance optimization, and production support.

Core Competencies: Python, OOP, REST API Development and Integration, Django, Django REST Framework, FastAPI, Flask, SQL, PostgreSQL, MySQL, BigQuery, JSON, Third-Party API Integration, Microservices, Multi-Tenant Architecture, Celery, Redis, Docker, CI/CD, Git/GitHub, Linux/Shell Scripting, VPS Deployment, Nginx, Automation Scripting, Selenium, Google Apps Script, Unit Testing, Code Review, Technical Documentation, Agile.

SKILLS

Programming and Core CS: Python, SQL, JavaScript, TypeScript, Object-Oriented Programming (OOP), Data Structures and Algorithms, clean, scalable and reusable code practices

Frameworks: Django, Django REST Framework, FastAPI, Flask, Node.js, React, Next.js, Ruby on Rails

Databases: PostgreSQL, MySQL, Google BigQuery, SQLite, MongoDB (migrated to PostgreSQL), Redis, schema design and migrations

APIs and Integration: REST API design and development, JSON, JWT Authentication, OAuth, SSO, third-party API integration (Google Ads, Google Analytics/GA4, Gmail IMAP/SMTP), Slack and WhatsApp dispatch

Async and Background Processing: asyncio, aiohttp, Celery, Redis, Sidekiq, APScheduler, MinIO/S3 object storage

Deployment, Servers and DevOps: Ubuntu VPS provisioning and deployment, Nginx, process management, Docker, Docker Compose, Git, GitHub, CI/CD, Linux shell scripting, Google Cloud Platform (GCP); Azure/AWS fundamentals

Automation and Data Processing: Python automation scripting, Pandas, NumPy, Selenium web automation, Google Apps Script, Google Sheets, Advanced Excel, openpyxl, PDF/HTML parsing (PyMuPDF, OpenCV, pytesseract, BeautifulSoup4), ETL pipelines, n8n workflow automation

Quality and Process: Unit Testing, Pytest, Debugging, Code Review, Technical Documentation, Agile/Scrum, Production Support

Generative AI (supplementary): Claude AI, OpenAI GPT, Google Gemini, RAG, Multi-Agent Systems, Prompt Engineering

EXPERIENCE

Data Analyst and Automation Developer

August 2026 - Present

Jolly Clamps Pvt. Ltd. (JCPL), Mumbai, India

- Backend and REST API Development:** Built an internal enterprise portal with a Django REST Framework and PostgreSQL backend and a React (Vite) frontend, exposing REST APIs over structured ERP and production-planning data models.
- Data Ingestion Automation:** Developed a reusable openpyxl-based parser library that automates ingestion of daily ERP and PPC Excel exports (dispatch trends, lead-time data, MPS/MTO schedules, forecast demand) into the portal database, replacing manual spreadsheet handling.
- Workflow Automation:** Automated recurring production-planning and dispatch reports using Google Apps Script, Google Sheets, and formula-driven Excel reports.

Data Scientist and AI/ML Developer

April 2025 - July 2026

MCM BPO (MyCountryMobile), Mumbai, India

- **Application Development and REST APIs:** Developed and maintained Python applications with Django and FastAPI-style services, designing and implementing REST APIs and backend logic for multi-tenant SaaS platforms; applied OOP principles and JWT authentication for clean, scalable, reusable code.
- **Multi-Tenant SaaS Engineering:** Architected a multi-tenant SaaS platform (Django 5, Django REST Framework, Celery, Redis, MinIO/S3, PostgreSQL, Next.js 15, Docker Compose) with row-level tenant isolation and asynchronous background processing; built an Instagram SMM panel with Node.js and TypeScript.
- **Server Deployment and DevOps:** Provisioned and deployed Python/Django applications on live Ubuntu VPS servers end-to-end — server setup, Nginx, process management, and production configuration; migrated a project's data layer from MongoDB to PostgreSQL; containerized services with Docker and managed CI/CD via Git/GitHub.
- **Production Platform Engineering (FloatChat):** Owned a 6-service production stack (Ruby on Rails 7.1, Sidekiq, PostgreSQL 16, Redis, Docker Compose, Nginx) and ran 141 schema migrations across 115 tables with zero data loss; shipped 2FA enforcement, GDPR Right-To-Be-Forgotten and DSAR actions, audit-log SIEM fan-out (Datadog, Splunk, Elastic), and a Redis-TTL SSO flow — live-testing 48 of 55 audit items and fixing 4 production bugs.
- **Database and ETL Pipelines:** Engineered ETL pipelines integrating Google Cloud BigQuery, Google Ads API, and dual-PostgreSQL schemas with 100% data accuracy on statistical validation.
- **Third-Party and Cloud API Integration:** Integrated Google Ads API, Google Analytics (GA4), and Google Cloud OAuth for Gmail IMAP/SMTP-based automated reporting; built 15+ n8n automation workflows connecting APIs and internal systems, reducing manual workload by 35%.
- **Automation Scripting:** Built a reusable Selenium web automation framework with proxy rotation (85% success rate across 15+ platforms) and Python OCR/parsing pipelines (PyMuPDF, OpenCV, pytesseract, BeautifulSoup4) for operational data processing.
- **Generative AI Integration:** Integrated Claude AI, OpenAI GPT, and Google Gemini APIs into backend reporting pipelines that dispatch automated summaries via Slack and WhatsApp — saving 10+ hours/week of manual reporting.

PROJECTS

WorkTrackZilla — Multi-Tenant SaaS Platform

2025

- Stack: Django 5, Django REST Framework, Celery, Redis, MinIO/S3, PostgreSQL, Next.js 15, Electron, Docker Compose
- Architected a multi-tenant SaaS REST API platform with row-level tenant isolation, asynchronous task processing, an admin dashboard, and an Electron desktop client, deployed via Docker Compose.

GA4 Paid Traffic Dashboard

2025

- Stack: Django 6.0, Django REST Framework, PostgreSQL, Google Cloud BigQuery, Google Ads API, Google OAuth, APScheduler
- Built an internal BI tool querying BigQuery for GA4 event data cross-referenced with Google Ads spend; configured Google Cloud OAuth for automated email report delivery and scheduled background jobs via APScheduler.

Universal Selenium Automation Framework

2025

- Stack: Python, Selenium, Proxy Rotation
- Built a reusable Selenium-based automation framework achieving an 85% success rate across 15+ platforms for scalable data collection.

Conversational AI Data Analyst

2025

- Stack: Python, Streamlit, Agno framework, OpenAI, Google Gemini, Pandas, SQLite, Docker, Pytest
- Built a Dockerized Streamlit app with BCrypt-based authentication where users query CSV/Excel data in plain English and receive charts and exportable reports.

Medical Data Extraction Pipeline

March 2025 - April 2025

- Built a Python OCR pipeline using PyMuPDF, OpenCV, and pytesseract achieving 95% accuracy and reducing manual entry time by 80%.

EDUCATION

Bachelor of Information Technology — Major: Data Science

April 2025

Ganpat University, Gujarat, India

Higher Secondary Certificate (HSC) — Computer Science

March 2023

Reena Mehta College of Science, Mumbai, India

CERTIFICATIONS

Python Programming Certificate	Codebasics, April 2025
Microsoft Power BI Data Analyst Associate	Coursera, June 2025
IBM Data Analyst Professional Certificate	Coursera, Nov 2024
